PROFESSIONAL SUMMARY

Full Stack Software Engineer with **7 years** of experience building fintech and logistics platforms with Node.js, Express.js, Angular, TypeScript and MySQL, plus Kotlin backend experience at Udaan. At OneCard, I own credit-card and loan repayment services for **1M+** users, delivering REST APIs that handle **10M+** transactions a month at **sub-200 ms** response times under PCI-DSS.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Kotlin, SQL

Backend: Node.js, Express.js, RESTful API Design, Microservices, Passport.js Authentication, AWS Cognito SSO, API Security, Asynchronous Processing, Background Jobs

Frontend: Angular, HTML5, CSS3, Bootstrap, Responsive Design

Databases & Caching: MySQL, MongoDB, Redis, Schema Design, Indexing, Query Optimization

Cloud & DevOps: AWS, GCP, Docker, CI/CD, Git

AI Tools: Claude Code, Claude, ChatGPT, Kiro (AI-assisted coding, debugging and code review)

Architecture: System Design, Scalability, High Availability, Caching Strategies, Load Balancing, Performance Tuning

Domain: Fintech (Credit Cards, Loan Repayments, Payment Integrations), PCI-DSS Compliance, Logistics, B2B E-commerce

PROFESSIONAL EXPERIENCE

FPL Technologies (OneCard)

Jan 2023 – Present

Software Development Engineer

- Own end-to-end development of credit-card and loan repayment features (Node.js/Express.js services, Angular front end, MySQL) for a customer base of **1M+** users.
- Designed and built secure REST APIs processing **10M+** transactions per month, keeping response times **under 200 ms** during peak billing cycles.
- Integrated **5+** third-party payment and financial service APIs, replacing manual workflows and reducing manual processing effort by **40%**.
- Improved application performance by **30%** by indexing and rewriting slow MySQL queries, adding Redis caching for frequently accessed data, and moving non-critical work to asynchronous processing.
- Implemented API security controls, including Passport.js authentication, AWS Cognito-based SSO, authorization and input validation, to keep services compliant with PCI-DSS and data protection standards.
- Work with product, design and QA teams to turn requirements into technical designs and releases.

Udaan

Nov 2021 – Dec 2022

Application Developer

- Built backend services and REST APIs in Kotlin and MySQL for B2B order and shipment workflows processing **500K+** orders per day.
- Reworked background batch jobs for order processing, reducing batch processing time by **35%**.
- Refactored legacy microservices and their data-access layers, reducing API latency by **25%** and improving service reliability.

Codeaxes

Jun 2021 – Oct 2021

Senior Software Developer

- Led delivery of client-facing web features, improving page load time by **20%**, and ran code reviews that reduced production defects by **30%**.

Cargo Exchange India Private Limited

Jun 2019 – May 2021

MEAN Stack Developer

- Built logistics web applications with Angular, Node.js/Express.js, MongoDB and MySQL, used by **10K+** monthly active users.
- Designed normalized database schemas and REST APIs, improving data retrieval performance by **40%**.
- Optimized front-end rendering and API data flows, reducing average page load time by **35%**.
- Also completed a software development internship at the company on its AgriTrade platform.

EDUCATION

M.Sc., Artificial Intelligence & Machine Learning (Online, Part-time)

Expected 2027

Woolf University, through Scaler Neovarsity

B.Tech., Computer Science | Aditya Engineering College

2019

FELLOWSHIPS & ACHIEVEMENTS

University Innovation Fellow, Hasso Plattner Institute of Design (d.school), Stanford University

2017 – 2018

Ran design-thinking workshops and hackathons for **100+** students across branches; visited Stanford and Google HQ, Mountain View, CA.

Languages: English, Telugu, Hindi
